

StorageGuard

YOUR DATA ISN'T SECURE,
UNLESS YOUR STORAGE SYSTEMS ARE.

StorageGuard is the industry's **ONLY** security posture management solution for storage & backup systems, to help you protect your most valuable data.

INTRODUCTION

When a hacker gets control of a PC, the damage is minimal. But when a hacker gets control of an organization's storage systems, they have access to **ALL THE DATA!** This includes backup, copies, recovery copies, and production data.

In fact, an attack on a single storage array is equivalent to an attack on one thousand servers.

Organizations used to assume that their storage & backup systems were far too deep in the datacenter core to reach. This assumption has now been proven wrong by hackers.

It's time for infosec teams to close the gap.

SOLUTION

StorageGuard provides the industry's **ONLY** security posture management solution for storage & backup systems. This complements existing vulnerability and configuration management tools, to ensure your most valuable data is protected.

MONITOR

Continuously scans and analyses your data storage & backup systems, to automatically detect security risks.

PRIORITIZE

Prioritizes those risks in order of urgency and business impact.

RECOMMEND

Provides clear recommendations to your security teams for repairing those risks.

REMEDiate

Facilitates automatic remediation, freeing up your time to focus on other key initiatives.

WHAT'S OUR SECRET SAUCE?

We are the ONLY company that can scan storage & backup systems for security vulnerabilities & misconfigurations.

We have built the most comprehensive Knowledge Base of security risks & vendor best practices for enterprise storage environments.

BENEFITS

StorageGuard gives you the peace of mind that your storage and backup systems are hardened, to withstand any cyberattack targeting your data.

VISIBILITY

For the first time, you can understand vulnerabilities and eliminate blind spots in your storage systems.

PRIORITIZATION

Act upon your most urgent vulnerabilities, where you're most at risk.

PROTECTION

Ensure all your storage systems can withstand ransomware and other attacks targeting your data.

COMPLIANCE

Guarantee storage systems are compliant with security regulations and standards.

You need to have governance and an active program to secure your storage and backup layers.
